

Project

- Implement a student admission program using the stable marriage algorithm
- Teams of 2
- Input:
 - Student and school preferences from a file in the format used in TD or your own format
 - User selects who does the bidding
 - Schools can accept multiple students, students go to one school
 - Schools have capacities
- Output:
 - Student to school assignment
 - Number of rounds needed to converge
- Evaluation (30% of the final grade):
 - Demo during last session, June 13
 - Report + code by June 23
